

Inventory Management System for retailers

Problem Statement:

The problem faced by the company is that they do not have any systematic system to record and keep its inventory data. It is difficult for the admin to record the inventory data quickly and safely because they only keep it in the logbook and are not adequately organized.

The retailers one of the challenging problems is that they face lot of issues in keep track of the inventory The retailers must know the expiry date of the products so as to avoid wastage of products and loss of money. The retailers should also keep track of the fast-moving goods and also the dead stocks to avoid going out of stocks for fast moving goods and also surplus incoming of dead goods.

Usually, Inventory Management systems are limited and fixed to a selected range of items and cannot be modified and extended based on the customer's needs. The Inventory Management System focuses on making it expandable and usable easily by the end user and with constant customer support to alter the use.

Interface as needed; separate login credentials are provided for the manager to insert and manage the stock and view the same. Unlike other software that provides similar functionalities. Inventory Management System focuses on making it easier by adding additional functionalities like vendor details and allowing to take attendance and keep a count of several members belonging to that organization.
